

# Stereographer CINE3D

The first stereo calculator with real-time depth simulation.

If you are director, DOP, photographer, stereographer or student, the Cine3D team has released the App you expected!

# 1

## configure

Choose and modify your camera, 3D-Rig, shooting style and screen among many presets.

# 2

## watch

Check instantly how your subject will be screened and see the consequences for the viewer.

# 3

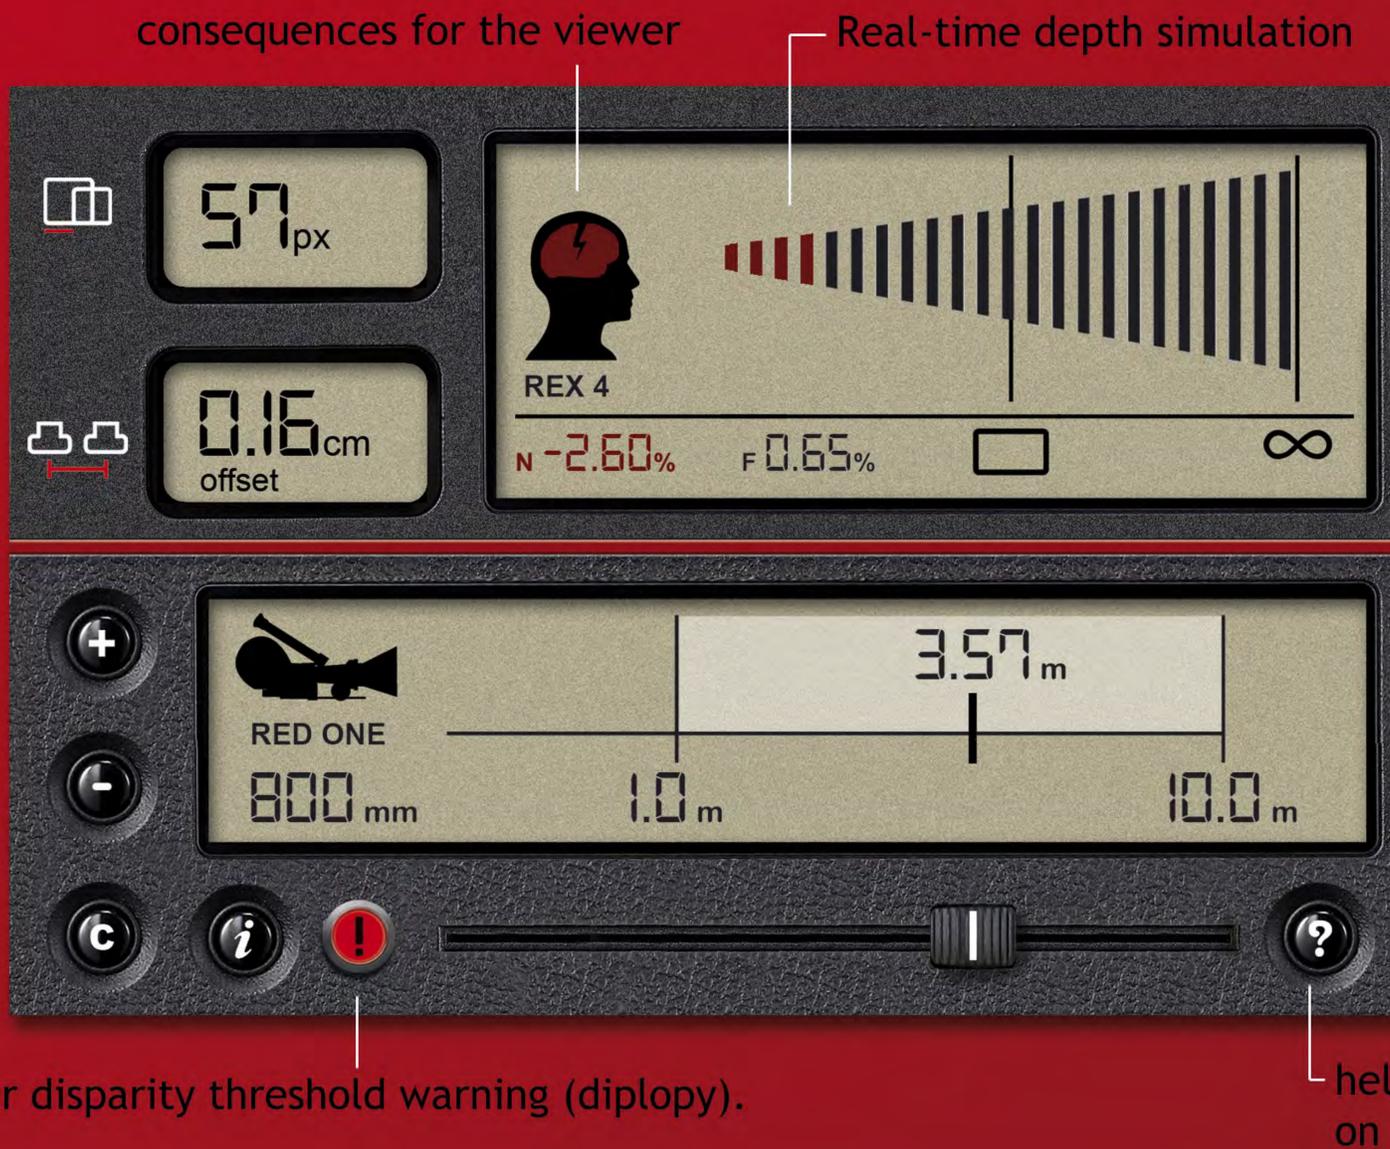

## decide

Use the suggested parameters or adapt them for a flatter or deeper 3D effect.

available on iTunes

 iPod  iPhone  iPad

# new features, fast and intuitive

e-mail tool for post-production

data base of the saved parameters

customizable target audience (adults, pre-school,...)

1.6 customizable crop-factor (very useful for photographers)

## Main features

- Many cameras, 3D-Rigs and screen presets (customizable)
- Suitable for Motion Picture and Stills work, Film or Electronic cameras
- Different shooting modes available with detailed explanations
- Real-time simulation of the final result (theatre, TV, laptop, IMAX, mobile phone...)
- Real-time warnings about the consequences for the viewer (pleasant3D, painful3D,...)
- Customizable target audience (adults, pre-school,...)
- Binocular disparity threshold warning (diplopy)
- On-screen offset in % or cm/in
- Manual adjustment of the calculated values
- Data base of the saved parameters / e-mail tool to send the elements for future use or post-production
- Operates in imperial or metric
- Customizable units
- Easy-to-use interface
- Night or day display mode
- Help button on each page
